

2005 National Barrow Show® Sire Progeny Test Loin Quality Terms

The average performance of each progeny group is reported to the respective breed associations. A brief explanation of each term on that report is shown below.

ADG	Average Daily Gain
BF10	Carcass backfat in inches measured off-midline at the tenth rib. Adjusted to 240-lb live weight and for sex.
LMA	Carcass loin muscle area in square inches. Measured at the tenth rib. Adjusted to 240-lb live weight and for sex.
QUALITY	Index that combines Minolta reflectance, ultimate pH and intramuscular fat percent of fresh loins. Higher is better. This is only a predictor of cooked loin tenderness.
SND	Soundness scored 1-5 for movement and structure of front and 1-5 for movement and structure of rear. Scores are totaled. Higher score is more sound.
pH	Ultimate pH, higher pH is associated with less drip loss.
MINOLTA	Light reflectance percent taken at 24 hrs. Lower is darker.
IMF	Percent loin intramuscular fat (total lipids). More is desirable.
COOKLOSS	Percent weight loss from cooking loin chop. Lower is best.
INSTRON	Star probe pressure of cooked loin in kg. Lower pressure indicates more tenderness.
TENDER	Sensory panel score of cooked loin tenderness on 1-10 scale. Higher scores are more tender.
JUICY	Sensory panel score of cooked loin juiciness on a 1-10 scale. Higher is more juicy.
HAL	0 = Normal, 1 = Carrier, 2 = Dominant
NAP	0 = Normal, 1 = Carrier, 2 = Dominant
