Alflex USA Inc.  
Iowa State University  
Iowa Pork Producers Association  
National Pork Producers Council

# **2006 National Barrow Show®**

## **Progeny Test Terms**

The average performance of each progeny group is reported to the respective breed associations.  
A brief explanation of terms on that report is shown below.

LITTER & IND	Ear notch.
SEX	1 = barrow; 2 = gilt
ADG	AVERAGE DAILY GAIN. Adjusted for sex; adj'd to 70 lb on-test weight.
BF10	BACKFAT. Reported in inches. Measured off mid-line at the tenth rib. Adjusted for sex; adj'd to 240-lb live weight.
LMA	LOIN MUSCLE AREA. Reported in square inches. Measured at the tenth rib. Adjusted for sex; adj'd to 240-lb live weight.
SND	SOUNDNESS. Scored 1-5 for movement and structure of front and also 1-5 for movement and structure of rear. Scores are totaled (2-10). Higher scores are more sound.
QUALITY	Index that combines Minolta reflectance, ultimate pH and intramuscular fat percent of fresh loins. Higher indexes are better. This is only a predictor of cooked loin tenderness.
LOIN MIN	MINOLTA color meter. Measures percent light reflectance of loin muscle @ 10 <sup>th</sup> rib 24 hours post-mortem. Lower is darker.
LOIN pH	ULTIMATE pH. Measured 24 hours post-mortem. Higher pH is associated with less drip loss and darker color.
IMF	Percent loin INTRAMUSCULAR FAT (total lipids). More is desirable.
COOKLOSS	Percent weight loss from cooking loin chop. Lower is best.
INSTRON	Star probe pressure of cooked loin in kilograms. Lower pressure indicates more tenderness.
TENDER	Sensory panel score of cooked loin TENDERNESS on 1-10 scale. Higher scores are more tender.
JUICY	Sensory panel score of cooked loin JUICINESS on a 1-10 scale. Higher scores are more juicy.
HAL	Halothane gene (DNA). 0 = Normal, 1 = Carrier, 2 = Dominant
RN	Napole gene (DNA). 0 = Normal, 1 = Carrier, 2 = Dominant
